All About Windows 7

Windows 7 (formerly codenamed Blackcomb and Vienna) is the latest version of Microsoft Windows, a series of operating systems produced by Microsoft for use on personal computers, including home and business desktops, laptops, netbooks, tablet PCs and media center PCs. Windows 7 was released to manufacturers on July 22, 2009, with general retail availability set for October 22, 2009, less than three years after the release of its predecessor, Windows Vista. Windows 7's server counterpart, Windows Server 2008 R2, is slated for release at about the same time. It was advertised using a video to show how people could demonstrate it to friends and family.

Unlike its predecessor, which introduced a large number of new features, Windows 7 is intended to be a more focused, incremental upgrade to the Windows line, with the goal of being fully compatible with applications and hardware with which Windows Vista is already compatible. Presentations given by Microsoft in 2008 focused on multi-touch support, a redesigned Windows Shell with a new taskbar, a home networking system called HomeGroup, and performance improvements. Some applications that have been included with prior releases of Microsoft Windows, including Windows Calendar, Windows Mail, Windows Movie Maker, and Windows Photo Gallery, will not be included in Windows 7; some will instead be offered separately as part of the free Windows Live Essentials suite.

Give Yourself Some Privacy

Like many other audio players, Windows Media Player rushes out to the Internet to find information for you when you play a CD. Some of this information, such as song titles and album art, is useful, but Media Player also identifies your copy of Media Player to the site where it's getting data. Why? According to the help file, "The server uses this unique identifier to monitor your connection. By monitoring your connection, the server can make adjustments to increase the playback quality and to alert you about events that occur when receiving streams over the Internet." If you're disturbed by this exchange of information, here's how to stop it. In Windows Media Player, click Tools > Options and go to the Player tab. Notice the option that says "Allow Internet sites to uniquely identify your player?" Turn it off.

Turn Wi-Fi Thieves' Worlds Upside Down

With the help of a lovely little service called Upside-Down-Ternet, you can turn that Wi-Fi thief's free Internet scheme upside down—literally. With a little clever scripting, every image the thief views via your connection is flipped upside down on his monitor and mirrored, making Web browsing difficult to say the least. You can also redirect every Web request the thief makes to a particular site—the author of the hack suggests Kittenwar.

SOLUTION GOLD PARTNER

Challenge

1. What was the first message sent through a network?
2. Who invented binary base?
3. Who appeared on a 1995 cover of Time headlined "Master of the Universe"?
4. What does HTML stand for?
5. Who services computers/printers at the best rate with the highest quality?

Last Months Trivia Questions & Answers

1. Unix is a registered trademark of which company? (AT&T)
2. Which computer company was first to develop a mouse? (Apple Computers)
3. Ethernet is a registered trademark of what company? (Xerox)
4. How big is a nibble (4 bits)
5. Where can you get the best price on computers, phones, copiers and video surveillance? Velocita Technology!

Multi Facility Campus Networking

Austin Tyler and the new Joliet Asphalt had a need to network multiple facilities at their campus located in Joliet. 3 buildings and 1 remote outdoor kiosk station needed to be networked by way of underground raceway. Velocita Technology created a backbone between each location and installed 100MB Ethernet to each of the networked devices.

Upon completing this project the users at any networked device located at any location have the ability to communicate with each other. The days of printing a document at Austin Tyler and walking it over to Joliet Asphalt are gone. A user in one facility can print to a printer located within another facility ... directly.

Telephones were also required to be installed within the new Joliet Asphalt facility. A Panasonic small business phone system provides the telephony between two buildings, again leveraging the underground cabling between the facilities.

Have a networking project that needs to be completed? Small or large, indoors or outdoors Velocita certified network designers can provide you a solution that is guaranteed to work.

Customer Spotlight

MorningStar Mission is a non-denominational organization dedicated to relieving the spiritual and physical hunger of the poor. They do this by providing food for the hungry, clothing for the needy and shelter for the homeless. Ministering to men, women, children and entire families, MorningStar Mission has served the less fortunate of Joliet and the surrounding Will County area since 1909 and is celebrating their 100th anniversary this year. Whether it's through a one-time meal or a long-term recovery program, they're committed to offering hope for the hurting. Velocita Technology has been providing MorningStar Mission with copier supplies and services since 2003. If you would like to donate to the annual winter holiday season food drive that provides Thanksgiving and Christmas meals for the homeless please call MorningStar Mission at 815-722-5780 or visit their website morningstarmission.org.
