Prevent Identity Theft

Identity theft is a major concern for all computer users. It is one of the fastest growing crimes in the world. An unprotected computer is the target identity thieves are searching for 24 hours a day, every day of the year.

You need to have an effective internet security suite, such as Panda Internet Security, installed on your computer and always keep it up to date. Never open any e-mail attachment unless you know where that email is from. Even then, e-mail attachments may contain viruses. For example, a friend's computer could be infected with viruses, trojans or worms which automatically send e-mail with attachments to all contacts in the address book. That e-mail is not actually sent by your friend but by the virus. So what is the solution? Using anti-virus software which has an e-mail scanning feature. The program will perform a check when you attempt to open an attachment and present a warning message if it finds any virus, suspicious file or behavior.

Never download files unless you can trust the website. Pirate download sites and torrent websites contain many files that are illegal and may contain viruses. A simple way to prevent direct attacks is a hardware based firewall. Do you have a router? If you answered yes, then you have a hardware based firewall already. If you don't and you're interested in increasing your internet security, Velocita Technology always has hardware based firewalls in stock.

Firefox is a free, secure, easy to use web browser and also the most popular one available. Firefox will block websites which contain viruses and show a message which tells you that the website has been blocked. Velocita Technology regularly installs Firefox on new computers and all computers in for service.

Tech Tips & Tricks

Ever see this message?

It's annoying and can prevent you from deleting files. Normally, a windows restart will allow you to delete such files or folders that are being used by other programs, but if you want to manage it without restarting your computer, then simply download a freeware tool called Unlocker.

Want to be able to use your own picture as your login picture? First, scan your picture and save it with .bmp, .gif or .jpg format. Click Start button, go to Settings > Control Panel and click on User Accounts option. Under User Accounts page, click on your account name and then click on "Change my picture" option.

4. How many copies of Windows 3.1 were sold in total? Over 3 million

Video Surveillance

Mr. Paul Gonzalez, Director of Building and Grounds for Lincoln-Way High School District 210, was in need of video surveillance for the new West campus located just off of Gouger Road in New Lenox.

Frank Brandolino and Cheryl Snyder of Velocita created a state of the art video surveillance solution for the new school and presented it to Mr. Gonzalez. The solution consisted of 3 video servers with over 16 Terrabytes of storage providing the district with approximately 30 days of video retention before it is overwritten by new video. Axis cameras were used with Verint's Nextiva recording management software. Verint's Nextiva is the same system currently in use today at Chicago's O'Hare and Midway Airports as well as every Walmart, Sam's and Home Depot across America.

Unlike most traditional video surveillance systems, this video surveillance solution is 100% digital from the camera to the cabling to the video recording servers. Digital video provides TV like quality, some of which are even considered high definition or HD.

One goal that the Lincoln-Way High School project required was quality. You cannot find a better system than what Verint and Axis offers and Velocita is your local manufacturer authorized reseller.

If you would like to have Velocita provide you with a free quotation on a video surveillance solution for your organization or business please contact us (815)744-9595. Velocita Technology has a Verint system with Axis cameras in our showroom located at 50 Barney Drive in Joliet. Please stop by to see the quality for your self; you will be amazed.

Customer Spotlight

This month's customer, Bariatric Minimally Invasive Surgery (BMI), offers surgical options to treat obesity, heartburn, colon cancer or any other disease. BMI Surgery is affiliated with Silver Cross Hospital—a Solucient 100 Top Hospitals National Award winner for three consecutive years. BMI is also a Bariatric Surgery Center of Excellence, Blue Distinction Surgery Center, and the area's most experienced and comprehensive obesity and minimally invasive surgery practice. BMI performed the first open, laparoscopic and LAP-BAND gastric bypass procedures in the greater Will and Grundy County Illinois area. Since then, BMI has helped thousands of people in Chicago, Joliet and the southwest suburbs win their personal battles with obesity and regain their lives. For further information on BMI please visit their website, www.bmisurgery.org, or give them a call at (815)723-8571.

BMI has chosen Velocita to be their technology partner. Is there a technology issue that Velocita Technology can assist you with?
